

Apps Associates' Microsoft Azure and Power BI Practice: Leverage Data for Transformative Insights

As companies embark on enterprise-wide digital transformation efforts or seek to leverage Data and Analytics, AI, and Machine Learning for game-changing insights, it has become apparent that a modern, scalable, efficient and cost-effective data platform is critical to achieving those objectives. However, many organizations are still struggling with legacy on-premises data and analytics platforms that are costly to maintain, inflexible, not scalable and unable to support the more demanding data use cases that are required to transform their business processes and remain competitive. Microsoft Azure and Power BI are world class, industry-leading Cloud-based platforms for building and deploying fully automated, trusted and secure data and analytics solutions with the ability to handle all an organization's data (structured, semi-structured and unstructured) and to support data science and machine learning. And now, with Microsoft Fabric, Azure Synapse, Power BI, Azure Data Factory, Data Science and Real Time Analytics are all available in a single integrated environment. Apps Associates has the expertise and practical hands-on implementation experience to leverage the Azure/Power BI platform for transformative, game-changing results.

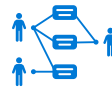

How Can Apps Associates Help?

Productionalization

Apps Associates Prebuilt Analytics Accelerators Built on Microsoft Azure Synapse Analytics and Power BI

Does it seem like a daunting task to get up and running on a Cloud-based data platform like Azure? Are you worried about how to extract data from your mission critical source systems and how long it will take to build these pipelines? Would you like to avoid starting from scratch when building reports and dashboards? If you answered yes to any of these questions then Apps Associates' Prebuilt Analytic Accelerators Built on Azure and Power BI are for you. Over the years of building data warehouses on Azure and Power BI we have built and refined analytics solutions for Finance, Procurement, Supply Chain and Human Capital Management. Our Analytics Accelerators include prebuilt data pipelines from Oracle ERP (both Cloud and on prem), Salesforce and Workday, prebuilt star schema data model, prebuilt semantic model and prebuilt Power BI reports and dashboards. Our Analytics Accelerators leverage Azure's world class medallion architecture (Bronze, Silver and Gold layers) and data lakehouse approach. We don't sell our Accelerators – they are provided to our clients at no cost when we are hired to improve analytics leveraging Microsoft Azure and Power BI.

Architecture for Apps Associates Analytics Accelerators for Azure and Power BI

Accelerate, Don't Hesitate

With Azure and Power BI as your new Cloud data platform, implementation is more rapid than ever before. Apps will collaborate with you to install and configure our Azure and Power BI Analytics Accelerators and load data from supported data sources such as Oracle ERP within 4 weeks - flat.

Although data can be extracted from any source system, below are the source systems automatically supported by Apps Associates Analytics Accelerators:

ORACLE
E-BUSINESS SUITE

ORACLE
CLOUD APPLICATION

ORACLE
JD EDWARDS

ORACLE
PEOPLESFT

ORACLE
ENTERPRISE PERFORMANCE
MANAGEMENT SYSTEM

salesforce

workday

With Apps' extensive knowledge of Microsoft Azure, Power BI, MS Fabric and related ML and AI technologies, our Analytics Accelerators have been the answer when it comes to rapidly improving access to data and gaining deeper insights. Head to our [Data and Analytics homepage](#), or call us at +1.855.466.5066, to learn how you can leverage the power and flexibility of Microsoft Azure and Power BI to improve analytics and achieve strategic business objectives.
