Optimizing Supply Management with Oracle Cloud SCM

Healthcare providers face immense challenges in managing inventory efficiently to ensure critical supplies are available while minimizing costs. AppsAccelerate for Healthcare introduces Oracle PAR Management Workbench, a powerful tool designed to streamline inventory management, predict demand, and enhance replenishment processes across all healthcare stocking locations.

Key Features

1. PAR Management Workbench

- **Centralized Inventory Visibility:** Monitor inventory levels across all locations, from stockrooms to procedural areas.
- **Demand Prediction:** Leverage predictive analytics to forecast supply needs based on historical data and usage trends.
- **Bulk Maintenance:** Simplify replenishment with tools for efficient bulk stock ordering, improving user productivity.
- **Mobile PAR Counting App:** Manage inventory from any location with a user-friendly app. The app's offline mode ensures accurate tracking even in areas with limited connectivity, triggering restocks automatically when reconnected.

2. Flexible Replenishment Methods

- **PAR Count Method:** Automate restocking when inventory falls below set PAR levels, ensuring critical supplies are always available.
- **2-Bin Method:** Maintain backup inventory with a simple, Kanban-like system, enabling continuous availability of high-demand items.
- **Request Method:** Empower staff to submit on-demand requests for specialty or urgent items outside standard PAR inventory.

3. Enhanced Inventory Processes

- **Holistic Management:** Connect replenishment workflows with Oracle Fusion SCM for seamless stock movement and supply chain visibility.
- **Mobile Accessibility:** Oracle supports handheld device integration for efficient PAR counting, material transfers, and restocking across all stocking locations.

The Benefits for Healthcare Providers

✓ **Improved Efficiency:**
Reduce time spent on manual inventory tracking with automated replenishment processes and mobile access.

✓ **Optimized Resources:**
Proactively manage stock levels to minimize shortages or overstocking, reducing waste and cost.

✓ **Better Patient Care:**
Ensure caregivers have the supplies they need, when and where they need them, allowing them to focus on patients.

✓ **Streamlined Operations:**
Bulk-maintenance capabilities, demand forecasting, and mobile apps reduce administrative burdens and enhance productivity.

Dynamic Replenishment Across Departments
Automatically generate replenishment orders to align inventory with patient care demands in procedural areas or emergency departments.

Flexible Methods for Complex Needs
Utilize a mix of replenishment strategies, including PAR counts for routine supplies, Kanban for visual monitoring, and the request method for specialty items.

Mobile Inventory Management
Use the Mobile PAR Counting App to manage inventory on the go, including in locations with poor connectivity. Enable seamless restocking with offline mode and real-time updates upon reconnection.
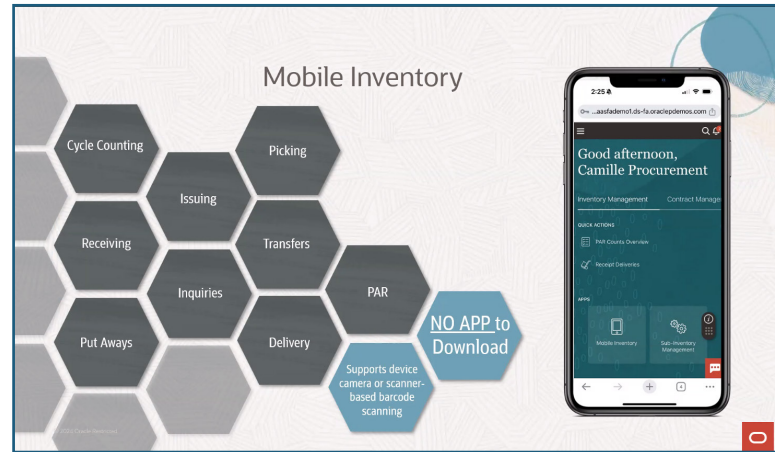

Demand-Driven Planning
Integrate real-time demand predictions to optimize restocking, ensuring the right inventory is in the right place at the right time.

Why Choose Apps Associates?

As a trusted Oracle partner, Apps Associates combines expertise in healthcare with deep knowledge of Oracle Cloud SCM. Our tailored implementations of the PAR Management Workbench are designed to optimize supply chain operations, enabling healthcare providers to deliver exceptional patient outcomes while reducing operational costs.

With proven experience integrating with leading **GPOs** such as **GHX** and **Vizient**, and **EHR** platforms including **Cerner, Epic, Meditech, and eClinical Works**, Apps Associates ensures seamless alignment of supply chain solutions with the critical systems that drive healthcare operations. This expertise uniquely positions us to address the complex needs of healthcare providers.
